

Overview

The K-PASS is an advanced audio recorder with a password protection function which ensures users can secure important recordings.

K-PASS comes with a range of accessories such as a lapel for wearable recording, an adapter for direct recording to landline telephones and earphones to listen to recordings directly from the device.

The K-PASS is an ideal everyday recording device for professional investigators who need to conduct interviews. And continually need to record and securely store audio files.

This device is not suitable for tactical covert use and is much more suitable for everyday use as a master recorder, the ability to protect sensitive information using the password protection feature sets the device apart from all other audio recorders in the market.

The Software interface on the K-Pass features an advanced set of features unlike many other audio recorders, built specifically for Investigators and Journalists.

Specifications
